

EVANSTON/SKOKIE
SCHOOL DISTRICT 65

Every Child, Every Day, Whatever it Takes

TO: District 65 School Board
CC: Dr. Angel Turner, Superintendent
FROM: Dr. Stacy Beardsley, Assistant Superintendent; Tamara Mitchell, Chief Financial Officer
DATE: November 17, 2025
RE: Scenario Modeling Next Steps

Objective: **Information** **X Discussion** **Follow-up** **Decision**

Background:

During the November 3, 2025 School Board meeting, the School Board discussed potential school closure scenarios. During the meeting, the School Board limited their focus to consideration of two two-school closure scenarios in the Haven feeder pattern. Based on the Board approved boundaries for 2026-27, the Haven feeder pattern consists of five schools: Foster (new - scheduled to open in August 2026), Kingsley, Lincolnwood, Orrington, and Willard.

The School Board requested that administration consider the following requests and provide the requested information to the extent possible by the next School Board meeting on November 17, 2025.

1. *Continue to refine scenarios 2D (Closing Kingsley and Willard) and 2F (Closing Kingsley and Lincolnwood) testing or applying the following:*
 - a. Scenario boundaries in full effect for the 2026-27 school year except:
 - i. Test for the feasibility of allowing current fourth graders to continue at their current school for 5th grade as long as it remains open.
 - ii. Test for the feasibility of current 6th and 7th graders to continue at their current school through graduation (up to 2 years).
 - b. Apply the previously Board defined option for current kindergarten through fourth grade students at Bessie Rhodes families to be automatically enrolled in Foster School for the 2026-27 school year.
 - c. Kindergarten through third grade students who live in the Foster boundaries attend Foster for the 2026-27 school year.
 - d. TWI students attend the TWI program at their home school or the TWI program in the student's feeder pattern.
2. *Survey families that live in the 5th Ward about intentions to attend the Foster School (non-committal survey for information gathering purposes only) and survey Bessie Rhodes*

families that do not live in the Fifth ward about intentions to attend the Foster School (non-committal survey for information gathering purposes only).

Additional actions the District administration has taken in preparation for this meeting include:

- Surveying the Kingsley community since they are named in both scenarios to gather input on boundaries that may be helpful during continued iteration on boundaries for next year.
- Built out a centralized data table for the K-5 schools in the Haven feeder pattern.
- Expanded the data tables for scenarios to help capture the range of data questions.
- Run scenario simulations to capture the feasibility of boundary options.

The remainder of this memo is intended to capture data and simulations that will support the School Board in discussions about school closures.

Section 1: Scenario Modeling and Data

In the last meeting, the administration shared scenarios 2D-R, 2F-R and 2A-R. These scenarios were developed with a focus on keeping closed school communities together to the extent possible and minimizing the number of students that would potentially be moved multiple times with school closures. Feedback from the School Board was to return to a heavier walkability emphasis and focus on simultaneous closures.

This memo shares revised models (2D-R2, and 2F-R2) that were developed using the following objectives:

- Minimize distance of walkable blocks
- Minimize Transportation
- Maintain FY27 boundaries (lesser relative weight)
- Utilization - max value at 90

In addition to looking at objectives, administration returned to STEP and TWI program placement and facility requirements.

STEP Program Placement

The STEP program provides structured, relationship-centered learning environments for students with autism who require individualized support in communication, sensory regulation, behavior, functional, and academics. The administration continues to evaluate where to place the STEP program with consideration for the impact of change for STEP students, as well as the desire to have the program in a location that will have the needed resources for hosting a STEP program. Since the last meeting, District administration continued to collaborate to identify program placement that can best serve the long term needs of the program, as well as the possibility of additional sections in the future.

After collaborating with the Academics team and specifically special education leadership, there are two options for placement of the current Lincolnwood program. One option is to place the program at Dewey Elementary (modeled in 2D-R and 2F-R). The rationale for this placement is connected to proximity to where current students live, feasible capacity, and ability to meet most of the STEP building requirements. The second option that is being considered is moving STEP to Lincoln and combining it

with the existing classrooms. This would result in monolingual STEP at Lincoln (6 classrooms) and bilingual STEP at Washington (3 classrooms). This consolidates the Lincoln and Lincolnwood STEP programs into one site. As explained below, there are benefits to consolidating the monolingual STEP program to one site and Lincoln can support most of the building needs. To make this option feasible, the District would need to add a bathroom to a classroom.

In both cases, the District would reduce the capacity of the school building from a four section school to a three section school to ensure there is adequate space for related services, therapy spaces and potential program growth.

As part of the district's SDRP, the district is considering the following program alignment option to strengthen continuity of services, improve staff stability, and support long-term program capacity:

Co-locating all K–5 Monolingual STEP classrooms at Lincoln School; maintaining the K–5 Bilingual STEP classroom at Washington School alongside the Two-Way Immersion (TWI) strand; and ensuring that both K–5 STEP programs feed directly into the STEP program at Nichols for grades 6–8. This structure establishes a cohesive and developmentally aligned K–8 pathway for STEP students.

Co-locating all K–5 Monolingual STEP classrooms at Lincoln would create a more comprehensive and cohesive instructional environment by allowing students and staff to share consistent routines, communication systems, visual structures, and sensory and behavior supports. When STEP classrooms are located together, educators, related service providers, and paraprofessionals are able to collaborate throughout the school day, engaging in shared planning, modeling of instructional strategies, and real-time problem-solving. This daily coordination supports aligned instructional language and expectations, helping students generalize skills across contexts.

Establishing the program in one location also allows for a dedicated team of STEP-focused related service personnel, including speech-language pathologists, social workers, occupational therapists, and paraprofessionals who are consistently embedded within the Lincoln program. Concentrating related service providers at a single site strengthens the depth and alignment of therapeutic supports, increases opportunities for professional development centered on autism-informed practice, and promotes ongoing collaborative consultation among instructional and clinical staff. This shared expertise improves program coherence and supports a unified approach to communication, sensory regulation, behavioral planning, and inclusive opportunities.

To fully support student needs, the STEP program requires classroom environments with specialized space considerations, including areas that allow for calming, sensory regulation, structured teaching, and small-group work. The program also benefits significantly from dedicated sensory rooms, where students can regulate and return to learning readiness, and from classroom-adjacent or nearby bathrooms, which reduce transition demands and support independence and dignity. Additionally, appropriate workspace for related service providers is needed to ensure consistent and integrated therapeutic support throughout the school day. Centralizing the program at Lincoln allows these space needs to be planned for and implemented intentionally and consistently, rather than recreated in multiple school environments.

Centralizing the program further encourages deeper staff knowledge development, shared professional identity, and stronger staff retention over time. A single-site structure supports the development of shared sensory and therapeutic environments without duplicating resources across multiple schools. By fostering a stable and cohesive team familiar with students' learning profiles and support needs, the district increases continuity and predictability, elements essential to emotional regulation, engagement, and academic growth.

Maintaining the Bilingual STEP classroom at Washington ensures alignment with the Two-Way Immersion strand. Students who require STEP supports while developing bilingualism benefit from remaining in a setting where bilingual instructional practices, peer language models, and cultural identity development are intentionally supported.

Both the Lincoln Monolingual STEP program and the Washington Bilingual STEP program would continue to feed directly into the STEP program at Nichols for grades 6–8. This unified and predictable transition ensures that students move into middle school with familiar systems and support strategies in place, reducing transition-related stress and promoting continuity in communication, sensory regulation, and behavior frameworks.

The district will continue to provide coordinated professional development for educators, related service providers, and paraprofessionals, focusing on autism-informed practices, AAC implementation, sensory regulation approaches, and consistent behavior-support frameworks. Shared professional learning strengthens instructional quality, supports staff retention, and contributes to cohesive and sustainable program identity.

As part of the SDRP, the district is considering a STEP structure that establishes Lincoln as the centralized K–5 Monolingual STEP program site, maintains the Bilingual STEP classroom within the TWI strand at Washington, and continues a unified feeder pathway to Nichols for grades 6–8. This approach strengthens program continuity, ensures comprehensive instructional and sensory support, meets key space needs, and provides students and families with a consistent, aligned K–8 experience.

For scenarios 2D-R2 and 2F-R2, the administration has modeled with STEP consolidated at Lincoln. Both options for STEP program placement are feasible. The administration will continue to explore both options by engaging with school leadership, the specialized services department and buildings and grounds before finalizing a program placement decision. Both models are feasible from an enrollment and capacity perspective.

TWI Program Placement (% of TWI students in a new location)

Scenarios 2D-R2 and 2F-R2 continue with consistent TWI strand placement from the previous 2D and 2F scenarios. These scenarios reflect reducing the number of TWI strands districtwide from eight strands (1st-5th grade in 2025-26, kindergarten has 7 strands this year) to seven strands (K-5th grade for 2026-27). Strands are reduced to seven due to lower enrollment numbers in TWI classrooms, including several sections that are below District TWI guidelines for class size minimums.

With eight strands and TWI classrooms at 90% of the general education maximum capacities, the districtwide utilization is 68%. When scenarios shifted to 7 strands, the districtwide utilization rate in TWI classrooms is 75%. Average class sizes with 8 strands per grade are 16 and 7 strands per grade are 19. Additionally, this year, seventeen of the forty classes in kindergarten through fifth grade that were fifteen students or lower were TWI classrooms.

The modeling utilization rates and patterns of underenrolled classrooms led the administration to shift to modeling with seven TWI strands per grade districtwide. To place these strands, the administration reviewed and utilized guidance from the SDRP program subcommittee. As a reminder, the SAP III process first completed a data analysis on TWI recommendations and generated guidance to inform the SDRP process in supporting sustainable, robust TWI strands. This information was presented to the SDRP program subcommittee for inclusion in their work. The guidance for strand placement is as follows:

- Consider establishing/maintaining at least one TWI program in every middle school feeder pattern, with a focus on historically underserved neighborhoods.
 - Double strands in TWI buildings and feeder patterns may help strengthen instructional depth, facilitate collaboration, and ensure equitable access to services across Evanston.
- Maintain the 67/33 classroom composition and prioritize walkable access for TWS/TWX students, particularly across hazard zones wherever possible.
 - Ideal TWI classroom composition is 50% native Spanish-speaking students and 50% native English-speaking students; however, in real world practice that is not always possible. The dual language model does have flexibility which allows for a composition as low as 33% native English-speakers or 33% native Spanish-speakers (a 67/33 split between language groups) and still retain model integrity

It is for these reasons that the District has shifted to seven strands and placed the strands as follows: Foster (2), Washington (2), Dewey (1), Dawes (1), Oakton (1).

Data Tables for 2D-R2 & 2F-R2 (Capture more detailed views of 2D and 2F) can be found in Appendix A.

Modeling the Impact of Instituting Expectations to School Closure Scenarios and Boundaries.

In order to test feasibility of various boundary exceptions for revised scenarios 2D-R2 and 2F-R2, the administration considered an analysis that performs a systematic parameter sweep to assess school utilization and capacity constraints under various scenarios. The analysis runs **14,641 total scenarios** to evaluate whether schools have sufficient capacity to accommodate different policy combinations with varying participation rates (0-100% in 10% increments). This parameter sweep systematically tests all combinations of participation rates rather than randomly sampling from probability distributions. Random sampling is only used to select which specific students participate at each participation rate.

The following labels were applied to capture the different exceptions that are being tested:

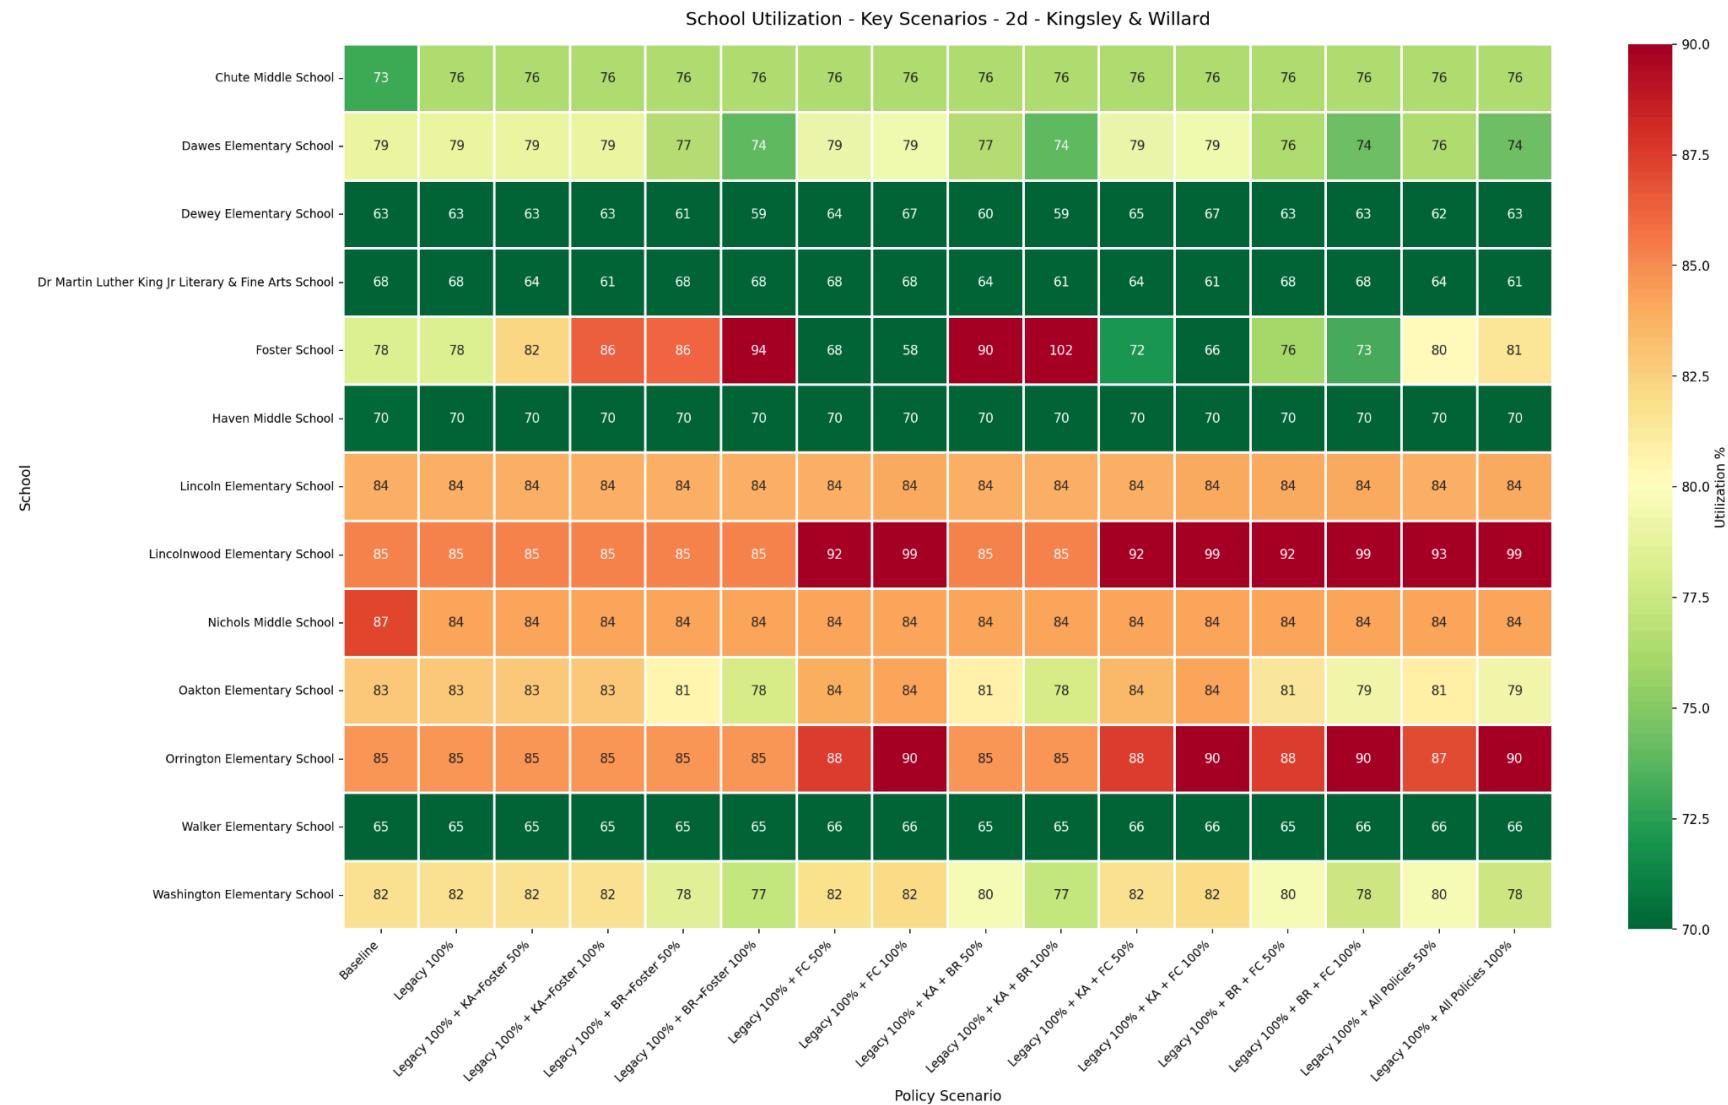

- Legacy: This tests the impact of allowing students who are currently enrolled in 6th or 7th grade to remain at their current school through eighth grade.
- KA -> Foster: This tests the impact of King Arts students possibly returning to Foster as their home school. A student is always allowed to return to their home school as long as there is capacity.
- BR -> Foster: This tests the impact of maintaining the exception that Bessie Rhodes families can attend Foster as opposed to attending their neighborhood TWI school.
- FC (Foster -> Current): This tests the impact of allowing elementary students that live in Foster's attendance boundaries to stay at their current school.

The simulation captures feasibility at 10% increments. Full information on the methodology and limitations can be found [here](#).

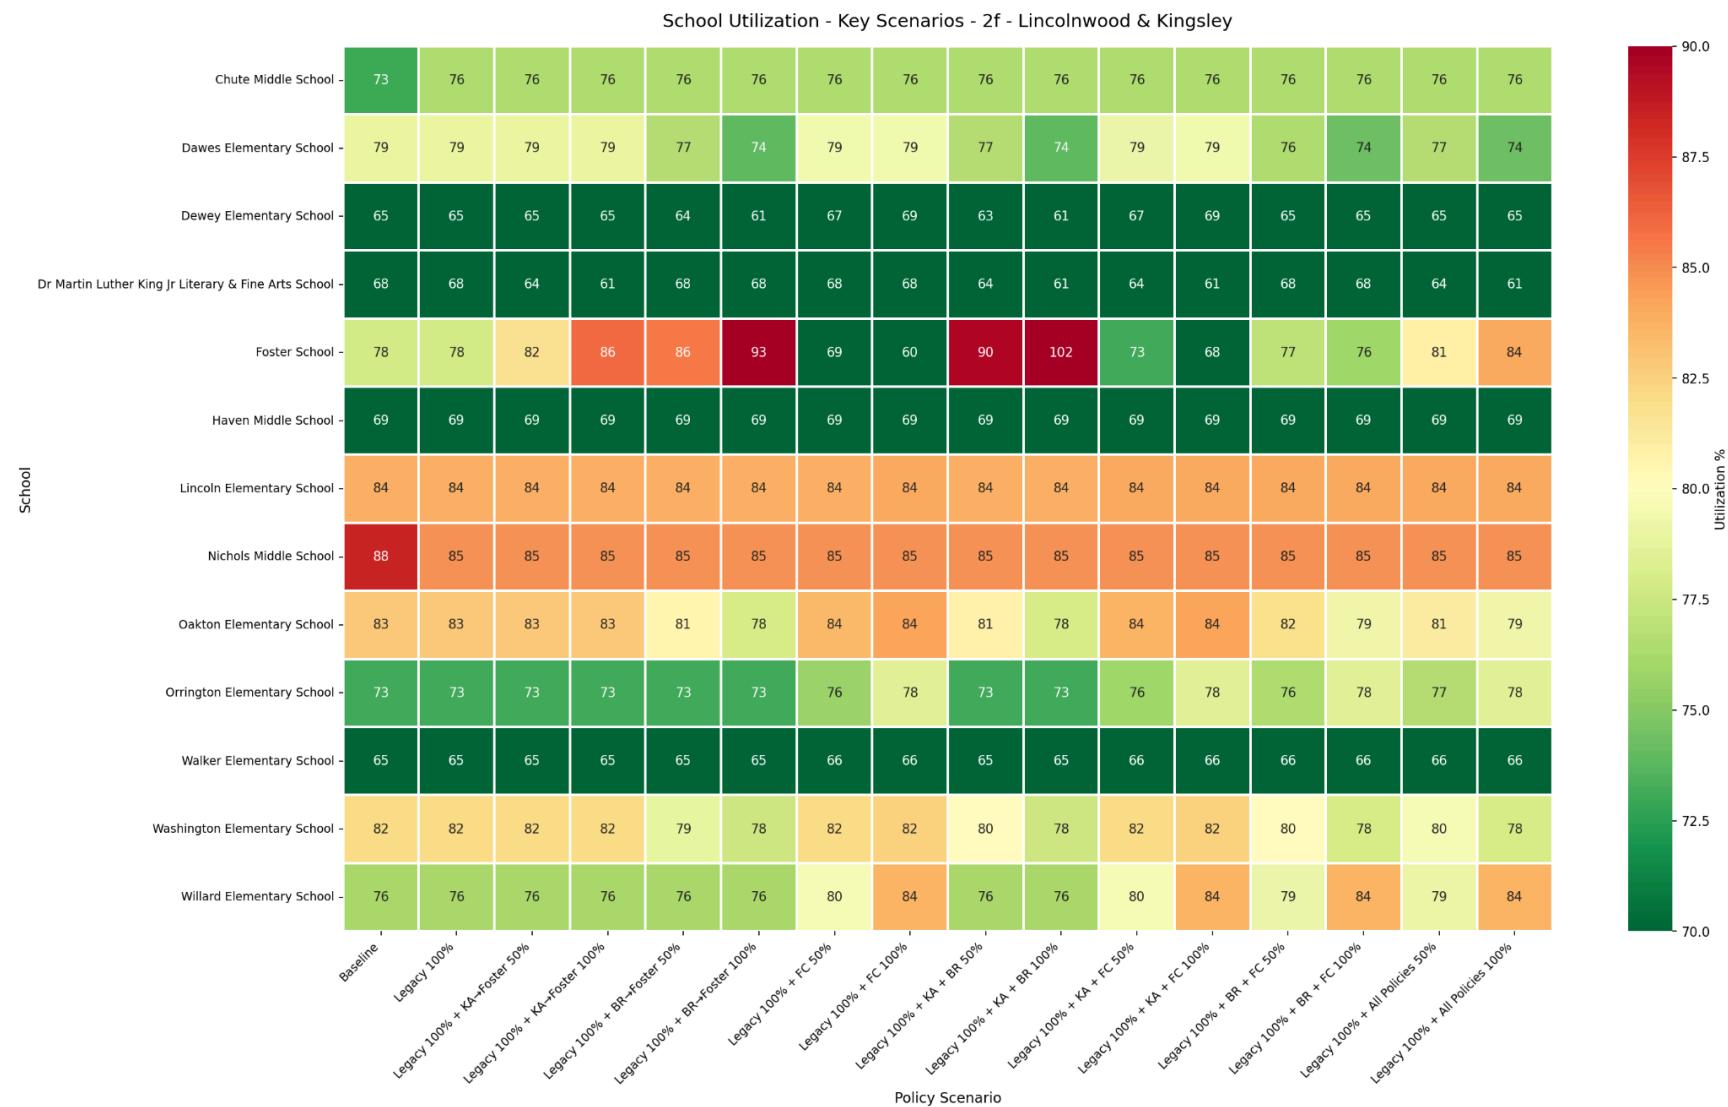

Specific limitations that administration wants to specifically name include:

1. **Participation rate granularity:** Only tests participation rates in 10% increments (0%, 10%, 20%, ..., 100%). Does not capture intermediate values (e.g., 15%, 25%).
2. **Fixed enrollment assumption:** Analysis uses current year student enrollment data. Does not account for:
 - Future enrollment changes
 - New students entering the district
 - Students leaving the district
 - Grade-level cohort size changes

Scenario 2D-R2 Heat Map

Scenario 2F-R2 Heat Map

Model and Define Parameters for a School Closure Scenario Boundaries

Any decision to close schools and define new Board approved boundaries must have clear rules attached to the decision so families know when the change takes place, who it applies to and steps they can take if they seek to attend a different school than their newly assigned school.

Currently, if a family wishes to attend a school other than their home school (determined by residence address and Board approved boundaries) families have three options:

- Apply to a magnet school (King Arts) or magnet program (ACC or TWI).
- Apply for a permissive transfer (Policy 7:30) by an annual deadline for the following school year.
The deadline for the 2026-27 school year is March 1, 2026.
- Apply for an administrative transfer (Policy 7:30).

When permissive transfers are submitted by the deadline, they are reviewed and either approved or denied based upon building enrollment trends, current capacity, and any special factors. Families generally hear before the opening of school but approval may come as late as one to two weeks before school opens since registration monitors ongoing enrollment.

An administrative transfer is generally tied to a safety concern. It is submitted by a school principal or designee after the family has partnered with their current school to attempt to address the issue, and is reviewed and approved by the Superintendent during the school year.

A family that is not in their home school may always request a return to home school. This option is open year round.

In addition to these options, previous Boards have defined special exceptions to allow families to have increased choice during times of change. The existing special exceptions include:

1. **(Rhodes)** Bessie Rhodes students who are currently enrolled in kindergarten through fourth grade are automatically enrolled in Foster school for the 2026-27 school year to allow the students to remain together as a cohort. Families may complete a return to home school form or apply to King Arts if they do not wish to attend Foster. If a TWI student completes a return to home school form, registration will either place them in the TWI program at their home school or in their feeder pattern.
2. **(Foster)** Students who are currently enrolled in kindergarten through fourth grade AND live in the Foster attendance boundaries are automatically enrolled in Foster school for the 2026-27 school year. Families may complete a permissive transfer request if they wish to have their student remain at their current school (as long as it remains open). The Board direction is to approve these requests to allow the families to remain at their current school however transportation will not be provided by District 65.

These special exceptions make forecasting enrollment, managing sections, and managing staffing for next year very difficult. If all of the exceptions remain in place, the administration may need to maintain extra classroom sections at Foster and any school that has a significant number of students impacted by an exception in order to be responsive to family decisions. The administration may also look at expanding multi-age classrooms if needed to manage classroom spaces and class size guidelines. A family may return to their home school at any time so it is feasible that families could start at their current school and return to their home school (Foster) during the school year creating an inflow of students through the year that can impact school culture building as well as significant fluctuations in class sizes. Below, the administration has outlined key questions for parameters and the administrative recommendations. There is a summary table for each key recommendation.

When will any new boundaries go into effect?

The administrative recommendation is that new boundaries go into effect for the next school year for kindergarten through sixth grade students.

Will any new exceptions be created by the School Board?

Administration modeled creating a legacy exception for 5th, 7th and 8th graders districtwide for scenarios 2D and 2F.

Legacy Status for Students in 5th grade for 2026-27

Legacy status would allow current fourth grade students to remain at their current school for the fifth grade year before moving to the middle school in the feeder pattern where they live. This would apply to any fourth grade student in the District that would be assigned to a new school for the 2026-27 school year. This does not apply to younger siblings of the student.

Legacy status in 5th grade is not fully feasible when paired with the commitment to Foster families that was shared with the School Board in March, 2022. When the Foster exception AND the proposed legacy exception for 5th graders are combined, capacities are not feasible assuming all or most families accept the option.

The District believes the preferred pathway for 5th grade students who wish to stay in their current school due to a boundary change is to use the District's existing permissive transfer process and the District will prioritize approving these requests as long as space is available. *The administration does NOT recommend guaranteeing that space is available by creating a legacy exception for fifth graders.* The administration recommends maintaining existing exceptions prior to creating any new exceptions.

Legacy Status for Students in 7th and 8th Grade Students

Legacy status would allow current sixth and seventh grade students to remain at their current school through eighth grade graduation. This would apply to any seventh and eighth grade student in the District that would be assigned to a new school for the 2026-27 school year. This does not apply to younger siblings of the student.

The scenario simulations support allowing a legacy exception for 7th and 8th graders.

Exception	2D Recommendation	2F Recommendation	Explanation
5th Grade Legacy	No	No	<p>Legacy status would allow current fourth graders to remain at their current school for the fifth grade year before moving to the middle school in the feeder pattern when they live. This would apply to any fourth grade student in the District that would be assigned to a new school for the 2026-27 school year.</p> <p>Alternative: Families apply for a permissive transfer and the District does a randomized selection for space available for permissive transfer.</p>
7th and 8th Grade Legacy	Yes	Yes	Legacy status would allow current sixth and seventh graders to remain at their current middle school through graduation.

Will any previous exceptions be honored or revised?

Bessie Rhodes Exception

This exception automatically enrolls current Bessie Rhodes kindergarten through fourth grade students into Foster School to allow the students to remain together as a cohort. These students may attend Foster through 5th grade. This does not apply to younger siblings of the students who are not yet enrolled in Bessie Rhodes.

Families may complete a return to home school form or apply to King Arts if they do not wish to attend Foster. If a TWI student completes a return to home school form, registration will either place them in the TWI program at their home school or in their feeder pattern.

The scenario simulations indicate if all families take advantage of this exception that Foster enrollment would exceed 90% utilization (Legacy $\frac{7}{8}$ 100% and Foster 100% for scenario 2D and 2F). It is important to note that in every case, utilization rates are more manageable for scenario 2F (closure of Lincolnwood and Kingsley). This is due to the fact that Willard has more classrooms and capacity than Lincolnwood.

The District still believes that it is in the best long term interest of the Board and the District to honor the Board commitment to Rhodes. Therefore, administration recommends honoring the existing Board commitment for the Bessie Rhodes exception. If enrollment approaches District maximums, the District will use existing strategies to avoid over enrollment. These strategies include use of permissive transfers, magnet seats, or if necessary capping enrollment. Similar to the past few years, there may be cases where classes exceed the class size guidelines however administration would work to limit these instances as has been the practice over the past two years.

Foster Attendance Boundary Exception

Students who are currently enrolled in kindergarten through fourth grade AND live in the Foster attendance boundaries are automatically enrolled in Foster school for the 2026-27 school year.

If a family wishes to have their student continue at their current school, families may complete a permissive transfer request (as long as the school remains open). The Board direction is to approve these requests to allow the families to remain at their current school however transportation will not be provided by District 65. This does not apply to younger siblings who are not yet in kindergarten.

The administration also ran simulations to test this existing Board exception. Allowing the option for Foster families to remain at their existing school does create some enrollment relief for Foster which could exceed 90% utilization if all Foster students attend and the Rhodes exception is honored. As can be seen in the simulations above, enrollment decreases making the school size more manageable in the short term.

The challenge for the Foster exception arises at the other Haven elementary schools that remain open as utilization rates exceed 90% at both schools in 2D. For 2D, Lincolnwood exceeds the 90% utilization if as few as 50% of the families accept the option to stay at the school (Legacy (%) 100%, KA, FC 50%). Allowing this exception to remain in place is more feasible for scenario 2F due to the increased capacity at Willard.

The challenge of allowing this exception to continue is that it inserts a great deal of uncertainty in our school specific enrollments and grade level numbers. That could mean more changes to sections and teaching assignments closer to the beginning of the year if families delay or change their decisions.

Despite the challenges that this exception may introduce, the administration recommends honoring this exception with a clear deadline for permissive transfer requests. If enrollment approaches District maximums, the District will use existing strategies to avoid over enrollment. These strategies include use of permissive transfers, magnet seats, or if necessary capping enrollment which could result in families moving into the attendance boundary and needing to attend a different District 65 school in the short term. Similar to the past few years, there may be cases where classes exceed the class size guidelines however administration would work to limit these instances as has been the practice over the past two years.

Previous Exception	2D Recommendation	2F Recommendation	Explanation
Bessie Rhodes Exception	Yes	Yes	Kindergarten through fourth grade students at Bessie Rhodes are assigned to Foster School through fifth grade. Families may complete a return to home school request if they wish to exit Foster. (Bessie Rhodes Resolution, 6/10/24)

Foster Exception	Yes	Yes	Students who live in Foster but attend another D65 K-5 elementary school during the 25-26 school year will be assigned to Foster school for 26-27 and a family may complete a permissive transfer to stay at their 25-26 school and the District is to accept this request automatically. (Board recommendation and commitment, 3/7/22 and 3/14/22)
------------------	-----	-----	---

TWI Program Placement:

- TWI students in current modeling are placed in the TWI program closest to their home in the feeder pattern.

The administrative recommendation is to have TWI students attend the program at their home school or in the feeder pattern where they live. This will lead to reassigning some TWI students to new schools and will change the composition of TWI cohorts. It also moves students into their feeder pattern prior to middle school making the transition to middle school smoother.

The District currently uses capacity, enrollment trends and special factors as the primary review criteria for evaluating permissive transfer requests. The district will review these criteria and process due to an expectation of an increased number of permissive transfers.

Additional Information Aligned to SDRP Process and School Closure Decision Making

Property Assessment Update

The real estate firm Mpact Collective, hired by District 65, did not include title or survey reviews in the scope of its school property assessments. Consequently, potential deed restrictions were neither analyzed nor reflected in the final report.

Mr. Filippini, in his letter to the Board, claims that this omission undermines the validity of the Scorecard rankings used to evaluate schools for potential closure. However, this argument does not hold in the case of Lincolnwood School. Because Lincolnwood is zoned as “open space,” Mpact correctly identified it as one of the least viable properties for sale or reuse. Out of 13 properties analyzed, Lincolnwood ranked third lowest, receiving an Income score of 4.3 out of 5.0 (with 5.0 indicating the least potential value). Only Dawes and Dewey scored lower.

To test the impact of this rating, we conducted a sensitivity analysis, adjusting Lincolnwood’s Income score from 4.3 to 5.0. The change had no meaningful effect as the total Scorecard score increased only from 2.06 to 2.12, which rounds to the same overall score of 2.1. This minimal change is expected since the Income category carries the lowest weighting (9%) among the five Scorecard criteria. Even if title or deed restrictions had been reviewed, Lincolnwood’s ranking and the overall conclusions of the Scorecard analysis would remain unchanged.

In light of Mr. Filippini's title analysis for the Lincolnwood property that may restrict the District's options for leasing and sale, District 65 is in the process of securing the titles for Lincolnwood and for the other three schools under consideration for closure: Kingsley, Orrington, and Willard.

While the impact on the scorecard will be nominal for all four properties if further information obtained from the title search would change the Income category score (see table below), it will be important for the Board and the community to understand the possible options for lease, sale or re-use as part of the decision-making process going forward.

School	Original Income Score	Original Total Score	Adjusted Total Score for Income = 1.0	Adjusted Total Score for Income = 5.0
Lincolnwood	4.3	2.1	1.8	2.1
Kingsley	2.1	1.9	1.8	2.2
Orrington	4.0	3.7	3.4	3.8
Willard	3.2	3.1	2.9	3.2

Community Feedback (Kingsley, Foster, Rhodes)

Foster community on preference for attendance next year.

The School Board requested that the administration gather input from the Foster school community to assess the communities current thinking about where they would prefer for their student to go to school next year within the limited set of options (Foster: Foster or current school). The survey is non binding and is for informational purposes only.

The District issued the survey on Tuesday November 11 and is keeping the survey window open until December 1, 2025. It is a District 65 standard to keep surveys open for at least ten days. This memo shares early data and a more final report will be shared in December.

As of noon on November 14, responses for forty students have been received

Option (Foster Boundary Families)	Percent	Number
My child will attend Foster School	13%	5
I will submit a Permissive Transfer Application for my child to remain at their current school	77%	30
I am undecided at this time	10%	4

Bessie Rhodes community on preference for attendance next year.

The School Board requested that the administration gather input from the Bessie Rhodes community to assess the communities current thinking about where they would prefer for their student to go to school

next year within the limited set of options (Rhodes: Foster or Home School/Feeder School with TWI). The survey is non binding and is for informational purposes only.

The District issued these surveys on Tuesday November 11 and is keeping the survey window open until Friday November 21, 2025. It is a District 65 standard to keep surveys open for at least ten days. This memo shares early data and a more final report will be shared in December.

As of noon on November 14, responses for forty students have been received

Option (Bessie Rhodes)	Percent	Number
My child will attend Foster School	73%	11
I will submit a Permissive Transfer Application for my child to remain at their current school	13%	2
I am undecided at this time	13%	2

Gather input from the Kingsley community on boundaries

Administration decided to also send a short survey to the Kingsley community to gather input on boundaries since Kingsley is named in both scenarios. The intention of this survey is to gather more detailed information on community values and preferences for boundary placement.

The District issued this survey on Friday, November 7 and is keeping the survey window open until Friday November 21, 2025. It is a District 65 standard to keep surveys open for at least ten days. This memo shares early data and a more final report will be shared in December.

Below administration shares the most common themes aligned to boundaries in responses as of 11/11/25. The District will continue to monitor responses and will create a summary report after the window closes. Some families also used the survey as an opportunity to advocate for a one school closure, communicate concern about the District's ability to close multiple schools and open a school simultaneously, and suggest considering reuse options for Kingsley including possible use by Park or JEH.

Kingsley Initial Survey Patterns (150 responses as of 11/11/25)

Most Frequent Themes	Incidence	Notes
Walkable	54	These comments included the ideas of convenience, keeping students in proximity to a school, holding this value for students in all portions of Evanston. A subset of these comments did reference walking to Foster.
Busing	10	Families mentioned the desire for busing if they need to cross Green Bay. Some families also mentioned wanting busing in the southeast side of Green Bay to Orrington. There was interest in communications on transportation info and the availability of transportation.
Friend groups	24	There were comments that focused more specifically on sub groups of students being able to stay together due to where they live (backlot,

Most Frequent Themes	Incidence	Notes
		independence park, north of central)
Avoid hazards	32	Extensive comments were made about the concern of crossing hazards, ensuring students are safe and have safe passage, as well as comments about the fact that crossing guards also have challenges on some days.
Bike routes/Safe Passage Plans	9	Families are looking for safe passage routes to and from school as well as bike routes.
Natural Boundaries	28	Comments focused on natural boundaries in the Haven feeder pattern (parks, dead ends, busy streets, etc.) and had suggestions on how these can be used to draw more specific boundaries.

Additional Data Table:

Administration is including an additional data table to support Board considerations. This table attempts to consolidate data for the schools and scenarios. The data table can be found on the next page.

Summarization of the Board Discussion: Action Steps

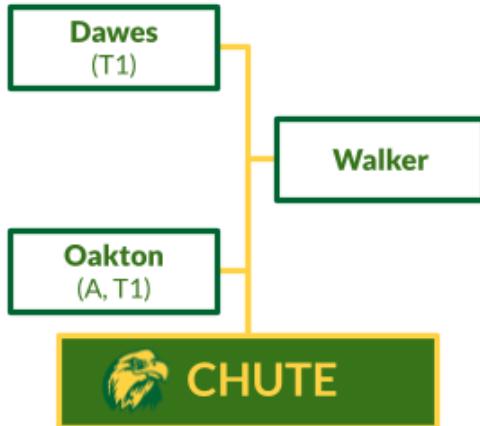

- Continue to refine scenarios 2D (Closing Kingsley and Willard) and 2F Closing Kingsley and Lincolnwood) testing or applying the following:
 - Scenario boundaries in full effect for the 2026-27 school year except:
 - Test for the feasibility of allowing current fourth graders to continue at their current school for 5th grade as long as it remains open.
 - Test for the feasibility of current 6th and 7th graders to continue at their current school through graduation (up to 2 years).
 - Apply the previously Board defined option for current kindergarten through fourth grade students at Bessie Rhodes families to be automatically enrolled in Foster School for the 2026-27 school year.
 - Kindergarten through third grade students who live in the Foster boundaries attend Foster for the 2026-27 school year.
 - TWI students attend the TWI program at their home school or the TWI program in the student's feeder pattern.
- Survey families that live in the 5th Ward about intentions to attend the Foster School (non-committal survey for information gathering purpose only) and survey Bessie Rhodes families that do not live in the Fifth ward to about intentions to attend the Foster School (non-committal survey for information gathering purpose only).

4

Utilization by Feeder Pattern - 2026-27

Middle School Feeder Pattern (2026-27 School Year)	Average Elementary School Utilization Rate Per Feeder Pattern
Chute (Dawes, Oakton, Walker)	73%
Haven (Kingsley, Lincolnwood, Orrington, Willard, and Foster)	50%
Nichols (Dewey, Lincoln, Washington)	68%

District 65 schools that do not follow an elementary/middle school feeder pattern:

Dr. Bessie Rhodes School of Global Studies, Dr. Martin Luther King Jr. Literary and Fine Arts School, Joseph E. Hill Early Childhood Center, Park School, and Rice Children's Center

2 School Closure Scenarios

Objectives for Scenario Modeling

- Minimize distance of walkable blocks
(More emphasis)
- Minimize Transportation (More emphasis)
- Maintain FY27 boundaries (lesser relative to others)
- Utilization - max value at 90

Updated 2 School Scenario Scorecard

	Equity			Geography				Building Functionality			Income	Costs			Total Score		
	Students Changing Schools	Who Is Impacted	Equity Score	Walkability	Hazards	Transportation	School Proximity	Geography Score	ADA Compliance	Gym Cafeteria Separation	Teaching Stations	Building Score	Income Potential	Capital Expense	Operating Cost		
2e-r - Willard & Orrington	5.0	5.0	5.0	1.0	5.0	1.5	5.0	3.1	3.0	5.0	5.0	4.3	3.5	5.0	3.2	4.1	4.0

2d-r - Kingsley & Willard	3.3	3.0	3.1	4.8	1.0	5.0	2.2	3.3	5.0	5.0	5.0	5.0	1.0	2.0	1.0	1.5	2.9
2f-r - Lincolnwood & Kingsley	1.0	1.0	1.0	5.0	1.0	4.5	1.0	2.9	3.0	1.0	1.0	1.7	2.5	1.0	2.8	1.9	2.0

Note: These are updated scenario scorecard values using the revised data AND the overall normative scores change since the results are normative and compared to a smaller group of scenarios.

General Notes for Both Scenarios

- Both scenarios include movement as a result of Bessie Rhodes closing, Foster opening, and the named schools closing.
- Regardless of modeling with a focus on increasing walkability and decreasing transportation, both models require students to cross Green Bay.
- K-5 utilization rates have become increasingly balanced with a range from 63% to the mid 80% for both scenarios.
- STEP program is relocated in both scenarios which will require limited capital improvements and professional learning investment.
- Willard TWI section is closed and all Haven feeder pattern TWI students will attend the Foster TWI strands.
- Orrington remains open despite being the smallest building and lot with limited parking and basement classrooms.
- Impact of the closures are largely absorbed by the 6th, 7th wards as well as portions of the 5th and 1st ward.
- Closed buildings can be used for program relocation or as swing schools during buildings renovations.
- Boundaries should be reviewed in no later than the 5-year requirement. Greater options for increasing walkability will be available after the Board commitments for Foster and Rhodes sunset.

8

Scenarios: Two-School Closure

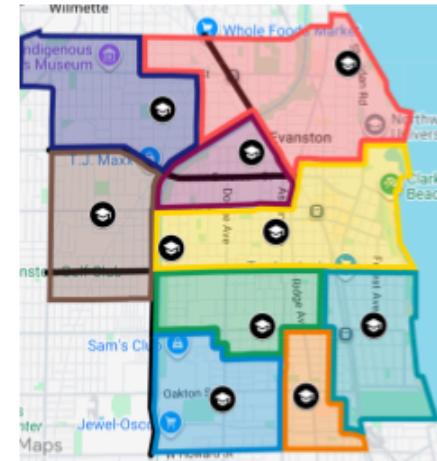

Close Kingsley and Willard (75%*)

Kingsley and Willard close after the 2025-26 school year.

- Close TWI Section at Willard Elementary
- STEP moves to Lincoln

Strengths

- Kingsley and Willard communities largely stay together
- Maintains centrally located school west of Green Bay
- Avoids closing adjacent schools and maintains a Haven feeder school south of Central in addition to Foster
- Reduction in annual operating cost (\$14K) with the closure of the larger school (Willard)

Challenges

- Closes two buildings (Kingsley and Willard) that are ADA accessible, more recently renovated (Willard), and have the highest building functionality scores leaving Foster as the only fully accessible school in the Haven feeder pattern
- Results in bussing 243 additional students
- Highest number of available classroom seats reduced due to closing Willard

Scenarios: Two-School Closure

Scenarios: Two-School Closure

Close Lincolnwood and Kingsley (75%*)

Close Lincolnwood and Kingsley after the 2025-26 school year.

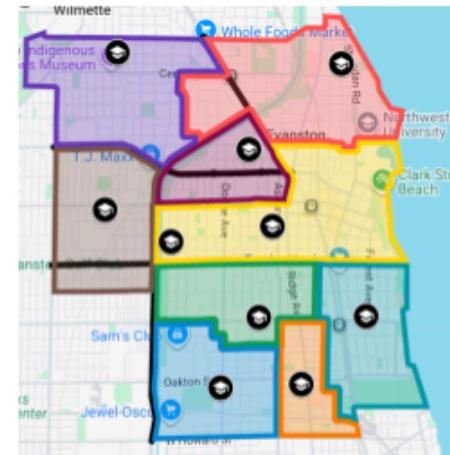

- Move STEP to Lincoln
- Close TWI Section at Willard Elementary

Strengths

- Aligns with scorecard data as it closes the two lowest-scoring individual schools and the overall lowest-scoring 2-school pair
- Keeps an ADA compliant school open (Willard), which is a larger and more recently renovated building
- The remaining three Haven schools (Foster, Willard, Orrington) are evenly spread across the boundaries.
- Students within 0.75 miles and students crossing hazards is slightly less in this scenario.

Challenges

- Uncertainty about the ability to lease Lincolnwood if closed (under review)
- Closes adjacent schools and leaves feeders north of central or south of McCormick.

Scenarios: Two-School Closure

Community Surveys

Future Foster Students Preference to Stay in Current School (K-4)

Option (Foster Boundary Families)	Percent	Number
My child will attend Foster School	13%	5
I will submit a Permissive Transfer Application for my child to remain at their current school	77%	30
I am undecided at this time	10%	4

Current Bessie Rhodes Students that Do Not Live in Foster Preference for Foster

Option (Bessie Rhodes)	Percent	Number
My child will attend Foster School	73%	11
I will submit a Permissive Transfer Application for my child to remain at their current school	13%	2
I am undecided at this time	13%	2

20

Boundary Parameter Testing

21

Boundary Parameter Testing

Overview: To analyze the feasibility of exceptions to a two school closure, administration ran a systematic parameter sweep to assess school utilization and capacity constraints under various policy scenarios. The analysis runs **14,641 total scenarios** to evaluate whether schools have sufficient capacity to accommodate different policy combinations with varying participation rates (0-100% in 10% increments).

Previous Exception	2D Recommendation	2F Recommendation	Explanation
Bessie Rhodes Exception	Yes	Yes	Kindergarten through fourth grade students at Bessie Rhodes are assigned to Foster School through fifth grade. Families may complete a return to home school request if they wish to exit Foster. (Bessie Rhodes Resolution, 6/10/24)
Foster Exception	Yes	Yes	Students who live in Foster but attend another D65 K-5 elementary school during the 25-26 school year will be assigned to Foster school for 26-27 and a family may complete a permissive transfer to stay at their 25-26 school and the District is to accept this request automatically. (Board recommendation and commitment, 3/7/22 and 3/14/22)

22

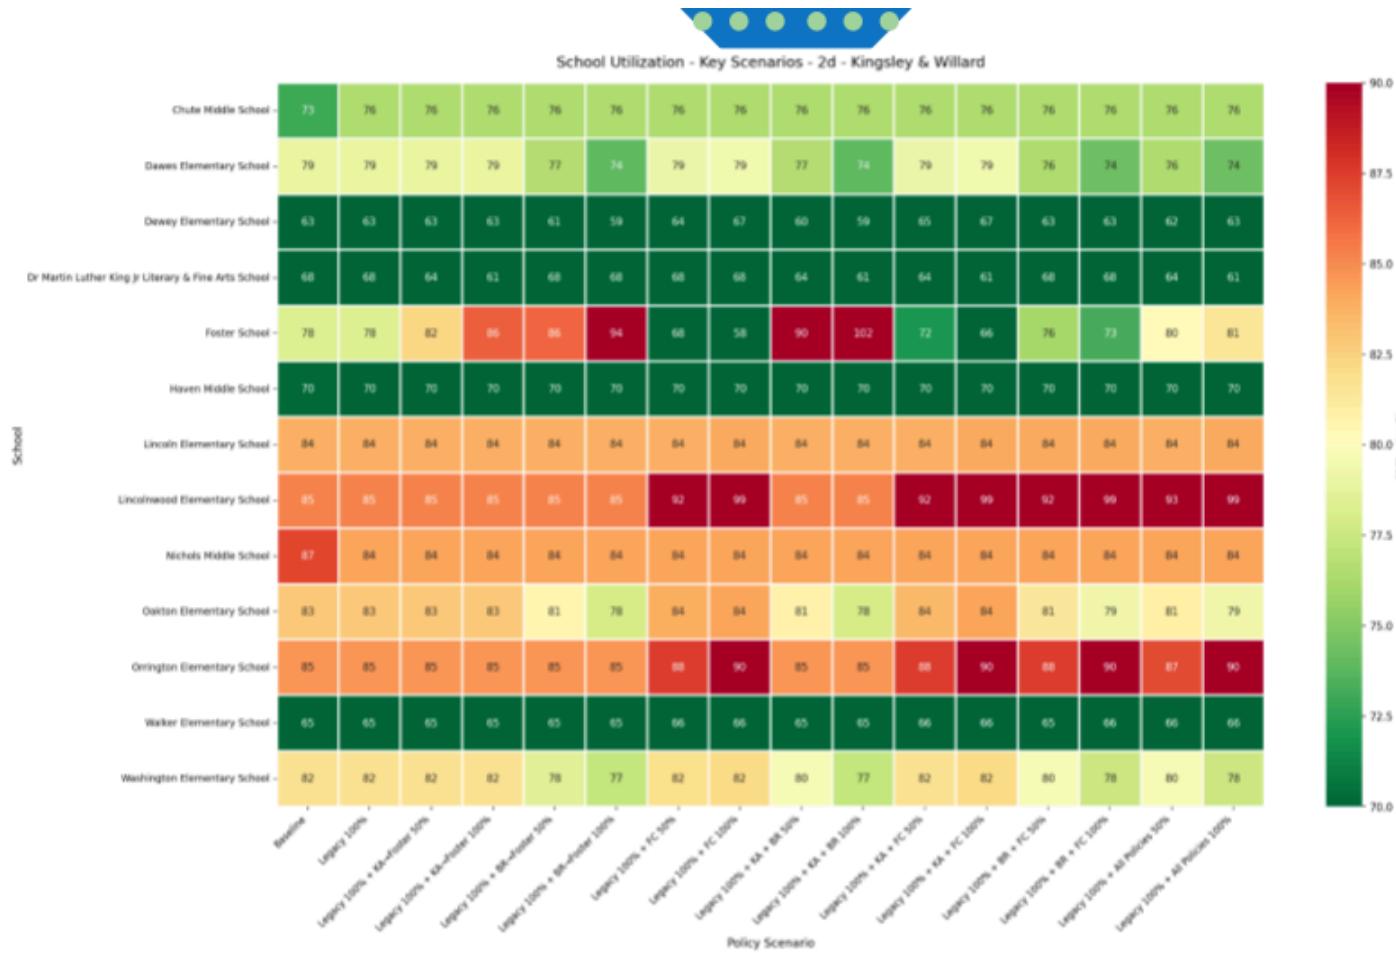

Boundary Parameter Testing

Overview: To analyze the feasibility of exceptions to a two school closure, administration ran a systematic parameter sweep to assess school utilization and capacity constraints under various policy scenarios. The analysis runs **14,641 total scenarios** to evaluate whether schools have sufficient capacity to accommodate different policy combinations with varying participation rates (0-100% in 10% increments).

Exception	2D Recommendation	2F Recommendation	Explanation
5th Grade Legacy	No	No	<p>Legacy status would allow current fourth graders to remain at their current school for the fifth grade year before moving to the middle school in the feeder pattern when they live. This would apply to any fourth grade student in the District that would be assigned to a new school for the 2026-27 school year.</p> <p>Alternative: Families apply for a permissive transfer and the District does a randomized selection for space available for permissive transfer.</p>
7th and 8th Grade Legacy	Yes	Yes	Legacy status would allow current seventh and eighth graders to remain at their current middle school through graduation.
