

iPad Procurement & Shared Cart Strategy (Option 2)

This document provides a comparative analysis between the original 1:1 procurement plan and the proposed **Option 2 (Shared Cart Model)**. This strategy leverages existing inventory to optimize the budget while maintaining educational technology standards.

See details below. We assumed NO iPads for K aside from Library, shared models for pairs of grades (1 and 2, 3 and 4) and a 1:1 ratio for 5th grade that continues through grade 8, after which they can be sold as part of the refresh cycle. This presents significant savings and there will be a small shortage of iPads per school during e-learning days. The district may decide to purchase additional iPads as 'loaners' to address these needs. The model below provides a savings of over \$200,000. We do not have exact numbers needed for STEP/RISE, Park, and Rice, but we currently have more iPads than needed for the shared model.

Potential issues:

- E-learning days: there will need to be additional loaners
- Testing windows: there may need to be use of additional carts from library/computer science

1. Executive Budget Comparison

This table compares the net new purchase costs between the original 1:1 model and the shared cart model.

This option transitions 1st and 2nd grade from 1:1 devices to a shared cart model. Highlighted lines are changes from D65 memo.

- A 1st-grade teacher will pair with a 2nd-grade teacher in their building to share a cart. Cart capacities are based on the highest enrolled section among the paired classes. Three school sites have an uneven number of sections in grades 1st and 2nd, requiring one additional unshared cart at those locations (Dawes, Foster, Walker).
- A 3rd grade teacher will pair with a 4th grade teacher in their building to share a cart. Cart capacities are based on the highest enrolled section among the paired classes. Assume similar unevenness in enrollment across sections/grades
- We will fill these carts using our current inventory of 1st-grade 11th Generation iPads, purchasing only the delta required to fill the carts.
- Dedicated carts must be purchased for both Library and Computer Science. These carts are sized by the highest enrolled section in K–2 (Library) or 2nd Grade (Computer Science), plus a 2-iPad buffer for mid-year enrollment, not to exceed DEC per-section seat caps.
- Kindergarten moves to library-only
- Specialized programs/schools (Park, Rice, STEP/RISE) remain 1:1.

Expenditure Category	Original 1:1 Model	Option 2 (Shared)	Variance (Savings)
1st/2nd and 3rd/4th Grade iPads (Net New)	\$183,708.00	\$0.00	(\$183,708.00)
1st/2nd and 3rd/4th Grade Cases (Net New)	\$17,230.35	\$0.00	(\$17,230.35)
3rd Grade Keyboard Cases	\$62,368.80	\$62,368.80	—
5th Grade iPads (Net New)	\$217,404.00	\$217,404.00	—
5th Grade Keyboard Cases	\$67,066.45	\$67,066.45	—
TOTAL PROJECT COST	\$547,777.60	\$346,839.25	\$200,938.35

2. Option 2 Procurement Breakdown

Detailed inventory application and net new purchase requirements for the Shared Cart Model.

Item Description	Qty Needed	Inventory Applied	Net New Purchase	Unit Price	Total Cost
iPad Wi-Fi 128GB (11th Gen) ¹	469	550	-81	\$324.00	\$0.00

Brenthaven 360 Case¹	469	624	-155	\$34.95	\$0.00
3rd Grade: Keyboard Case	624	0	624	\$99.95	\$62,368.80
5th Grade: iPad Wi-Fi	671	0	671	\$324.00	\$217,404.00
5th Grade: Keyboard Case	671	0	671	\$99.95	\$67,066.45
GRAND TOTAL					\$346,839.25

¹ For 1st/2nd and 3rd/4th Shared Carts, CS/Library Carts, and 1:1 needs for Park, Rice, and STEP/RISE.

3. Implementation Framework

The Option 2 strategy transitions 1st through 4th grades to a shared model while maintaining 1:1 access for 5th grade and specialized programs.

- **Sharing Logic:** 1st and 2nd-grade teachers (and 3rd/4th) pair to share a single cart.
- **Capacity:** Carts are sized to the highest enrolled section in the pair plus a buffer.
- **Specials Carts:** Library and Computer Science receive dedicated carts sized for the maximum section plus a **2-iPad buffer**.
- **1:1 Programs:** Kindergarten (repurposed units), 5th Grade, and Special Schools (Park, Rice, STEP/RISE) remain 1:1.

4. Illustrative School Model (300 Students)

Example of device distribution for a school with five sections in paired grades (1 and 2, 3 and 4) and 5th grade

A. Total Device Footprint

Grade Category	Enrollment	Environment	iPad Count
Grades 1 & 2	100	Shared Carts	55
Grades 3 & 4	100	Shared Carts	55
Grade 5	100	Personal 1:1	63
Specials (Library & CS)	—	Shared Carts	46
TOTAL	300		219

Efficiency Note: This represents a savings of **81 iPads** per 300-student school compared to a 1:1 model.

B. Shared Cart Allocation Logic

Grouping	Configuration	iPads
Pair A	1st Grade (22) / 2nd Grade (19) + 1	23
Pair B	1st Grade (20) / 2nd Grade (19) + 2	22
Pair C	1st Grade (20) + 1 / 3rd Grade (20) + 1	22

Pair D	3rd Grade (22) / 4th Grade (19) + 1	23
Pair E	3rd Grade (20) / 4th Grade (19) + 1	21
5th Grade	Personal 1:1	62
Library	Max Section + 2 Buffer	23
Comp Science	Max Section + 2 Buffer	23
BUILDING TOTAL		219
